

ENVIRONMENT, HEALTH AND SAFETY MANAGEMENT

CHANGE THE WORKING ENVIRONMENT

Environmental issues and employee rights are growing topics of discussion in the business arena. It is, therefore, essential that companies address and incorporate such issues into their strategic management. The use of transparent procedures in these matters is also vital to maintain accountability.

Environment, Health and Safety Management is, in essence, a systematic approach to the prevention of costly mistakes and damages that can significantly impact the health of staff, the company environment, image, and goodwill.

OPTIMISATION AND EFFICIENCY

Development in the areas of environment, health and safety has focused primarily on the improvement of company atmosphere and productivity. Benefits that are often observed as a result are reduction in operational costs due to decrease in employee absenteeism, decrease in liability claims and damages, and generally better conditions which support and encourage market competitiveness.

ENVIRONMENT, HEALTH AND SAFETY

The areas of environment, health and safety are continually being amended to incorporate emerging and innovative technologies and methods. A hygienic and safe working environment improves health and well-being. Working conditions, professional orderliness and conduct, and the culture of the work place have a clear and deciding impact on accident risk and employee absenteeism due to illness. Investment in the company community, i.e. with environmental protection and responsible employee strategies, strengthens the position and general welfare of the company, which in turn improves the quality of its output.

ALMENNA CONSULTING ENGINEERS

Almenna Consulting Engineers offers specialised consultation services to assist companies in establishing and applying their own tailored environment, health and safety management principles to every facet of their business. The scope and format of these principles is determined by client need and desired results. Specialists at Almenna are particularly experienced in improving the health and safety of corporate workplaces and offer integral services in these areas.

ANALYSIS AND STRATEGY
